

**Who we are:**

Finish Line is a team of talented product development engineers – electronic, mechanical and software. Each of us comes from a rich set of industry experience and this diversity provides a very unique team capable of providing innovative products. Our focus is developing products for our customers that are successful in the market place. We understand that we both win when the products we design and manufacture for you earn a profit.

**What we do:**

We work with you and your team to design and manufacture products. These products usually contain some combination of electronics, mechanical components and firmware. We work with a broad range of industries segment.

**Who we do it for:**

Our ideal customer is a small business in niche markets. They want to rent an engineering team, not buy one. Since they manufacture in small quantities, the cost of development is a significant cost of providing the product. Our customers understand that they need to be good at designing world-class products and they also know that by partnering with a world-class team they can afford to be world class.

**How we do it:**

Key to our success, and low-cost development, is starting with what we have already designed. One of our core competencies is recycling designs from one project to the next. When we start a project, we typically are already 50 percent done. By using these reference designs, we can cut the product development time and cost in half, while at the same time greatly increasing the quality of the product.

**How you can get started:**

Discussions about your needs are always free. Give us a call now, and find out how your company can start taking advantage of Finish Line's success.

**Finish Line PDS Product Engineering**

**Services:**

- Mechanical engineering
- Electronic engineering
- Firmware engineering
- PCBA layout
- Design verification testing
- Quick-turn prototypes
  - PCBA
  - Machine parts
  - Rapid prototype

**Expertise:**

- Wireless design
- Motor/Motion control
- Sensor/Data acquisition
- Battery-powered devices
- Internet connectivity
- Power supplies
- Battery chargers
- High-speed digital design
- Portable instrumentation

**Industries:**

- Medical devices
- Homeland security
- Downhole tools
- Consumer
- Manufacture machines
- Electronic test
- Industrial controls

**We design and manufacture products that make money.**
